WP-6R-02: Enoxaparin on the renal ward

Example General Hospital, Ward 6R. Version 3 (fictional). Owner: Ward 6R nurse in charge (fictional role).

FICTIONAL TRAINING DOCUMENT. Not clinical guidance. Example General Hospital is fictional.

Scope

Adult inpatients on Ward 6R (renal) prescribed enoxaparin to prevent venous thromboembolism.

Usual dose on Ward 6R

20 mg by subcutaneous injection once daily. Ward 6R local rule: treat every patient as having a creatinine clearance below 30 mL/min until the latest result says otherwise.

A dose above 20 mg needs the renal pharmacist to confirm it before the first injection.

Dialysis days

Give the dose after the dialysis session has finished, never before or during it. Record the dialysis end time in MedTrack.

When to hold and escalate

Bleeding from a dialysis access site that does not stop after 10 minutes of pressure: hold the dose and contact the prescriber.
